

ZERO³

Chemical Free Cleaning Technology

FACTORYCAT

ZerO3 Chemical Free Cleaning Technology

The O3+ System significantly outperforms traditional cleaning systems. It reduces the cost to clean, minimizes environmental impact, improves facility appearance, and is easy to operate and maintain. Two separate systems (the ZerO3 Aqueous Ozone system and Suds Onboard Chemical Dispensing system) provide effective solutions to meet your cleaning needs. These two systems can be integrated in one onboard system, and can be controlled with the flip of a switch.

EFFECTIVE ALL PURPOSE CLEANER

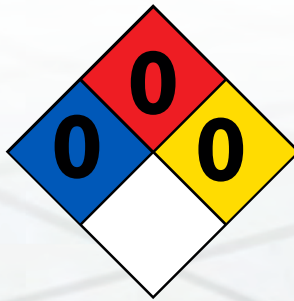

Similar to how bleach oxidizes, Ozone's (O₃) third radical atom makes it an extremely powerful cleaning agent.

The ZerO3 Aqueous Ozone (AO) system converts water into a detergent-free solution that cleans effectively, saves money, removes odors, reduces customer and employee complaints, and creates a healthier work environment compared to daily floor cleaning chemicals.

BACKED BY SCIENCE

The use of Aqueous Ozone as an effective and safe oxidizer of organic matter spans over 100 years. Used in water treatment plants around the world.

ZerO3 AO is operator and facility safe with a "triple 0" on the safety diamond. The ZerO3 AO system outperforms traditional chemical systems.

ENVIRONMENTALLY & OPERATOR SAFE

There is no danger of chemical spill. Employee health is protected through its operator friendly, non-caustic, non-toxic & antimicrobial properties.

The ZerO3 AO system can be installed on any new Factory Cat scrubber or the wall mount is available.
